DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: the disclosure is somewhat disconnecting.
 - (i) In pages 3-4, Compound (IV), $X-[CH_2]_n-X$ is used to prepare halogenated bisimine, however, the halogenated bisimine of formula (I) only represents the species where $X=Br$. It appears that "Br" in formula (I) should be "X" in order to have proper logic follow.
 - (ii) In line 10 of page 4, the "anion X^- " does not have antecedence.Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
3. Claims 14-32 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 14, "a supported single site catalyst" mentioned in step 4) is not form in step c) because there is no description of a support in the claim. Clarification is requested.

In claim 18, the article "a" should be deleted.

Allowable Subject Matter

4. The instant claims are directed to a supported catalyst comprising bisimine bidentate ligand containing nickel or palladium complex, wherein the bidentate ligand contains a ionic pair. Catalyst composition comprising bisimine bidentate ligand containing late transition metal complexes are known in the art which are disclosed in, e.g., Weinberg et al. (US 6,756,195) and Zhao et al. (US 7,067,450). However, those prior art does not teach or reasonably suggest the bisimine bidentate ligand to contain a ionic pair as the ligands of the complex of the instant claims. Therefore, the instant claims are deemed to be novel.
